(54) Title: DEVICE AND METHOD FOR COOLING HOT ROLLED STEEL BAND AND METHOD OF MANUFACTURING THE HOT ROLLED STEEL BAND

(54) 発明の名称: 熱延鋼帯の冷却装置と冷却方法および熱延鋼帯の製造方法

a center part where cooling water flows coming from the upper and lower parts merge with each other, installing dewatering rolls (16) having the same peripheral velocity as the transfer rolls at least on an outlet side movably in vertical directions, lowering, while rotating, the dewatering rolls at the same time when the tip of the steel band passes the cooling device and, at the same time, lowering also the upper surface cooling boxes so as to cool the steel band.

(57) Abstract: A method of cooling a hot rolled steel band, comprising the steps of installing lower surface cooling boxes (12) on a runout (3) allowing a steel band to be transferred between transfer rolls (11), installing upper surface cooling boxes (14) capable of being moved up and down from a line at the positions opposed to the lower surface cooling boxes, spraying cooling water against the steel band symmetrically in vertical direction, allowing the steel band to pass generally
